

Status of this document

This document forms part of an industry consultation release of Australian Rainfall and Runoff. We anticipate a complete launch by March 2016.

In development of this guidance, also discussed in Book 1 of ARR 1987, it was recognised that knowledge and information availability is not fixed and that future research and applications will develop new techniques and information. This is particularly relevant in applications where techniques have been extrapolated from the region of their development to other regions and where efforts should be made to reduce large uncertainties in current estimates of design flood characteristics.

Therefore, where circumstances warrant, designers have a duty to use other procedures and design information more appropriate for their design flood problem. The authorship team of this edition of Australian Rainfall and Runoff believe that the use of new or improved procedures should be encouraged, especially where these are more appropriate than the methods described in this publication.

Therefore where relevant this draft of ARR can be used in practice prior to finalisation.

Care should be taken when combining inputs derived using ARR 1987 and methods described in this document.

A summary of the status

Book	Content	Graphs and Figures	Examples
Book 1	Advanced Draft	Advanced Draft	Advanced Draft
Book 2	Working Draft	Working Draft	Working Draft
Book 3	Advanced Draft	Advanced Draft	Advanced Draft
Book 4	In Preparation	In Preparation	In Preparation
Book 5	Working Draft	Working Draft	Working Draft
Book 6	Working Draft	Working Draft	Working Draft
Book 7	In Preparation	In Preparation	In Preparation
Book 8	Advanced Draft	Advanced Draft	Advanced Draft
Book 9	In Preparation	In Preparation	In Preparation
